Our team of skilled and talented plumber offers you with best of plumbing UAE.

- ✓ Hot & Cold water Supply System
- ✓ Water Filtration System
- ✓ Irrigation System
- ✓ Swimming Pool Drainage Sanitation
- ✓ Rain Water Sewage Treatment

# MISTING SYSTEM

evaporative pre-cooling  
and humidification solutions  
misting systems & atomizers

**1,000 psi / 70 bar**

**Misting pumps modules up to 2580 kg/h (682 gph)**

Air conditioning systems perform of the worst in hot summer days, just when they are needed the most. The cooling capacity decreases by 14:155 and the power draw increases by 31%. The problem occurs in condensers which have to change vapors refrigerant into liquid forcing the oil through the unit and absorbing heat from the refrigerant causing it to condense.

Applying water fogging system to air-cooled chillers can improve the efficiency under most of the working conditions as the water mist could lower the air temperature entering the condenser.

**EFFICIENCY +30%**  
Lower energy consumption

On typical air-cooled chillers, a reduction in condenser air temperature of 6 °C will result 14% improvement in efficiency and 12°C about 25-30%.

High Pressure systems feature the lowest power consumption if compared to other humidification systems.

**Reduce your bills with our  
range of energy efficient  
solutions**

These intelligent energy saving systems, pre-cooling, humidification and direct/indirect evaporative cooling, will improve energy efficiency and will help you to save money and save energy from daily AHU use.
